22 January, 2018

Installation

1. Uncompress the file that you downloaded. This will yield a directory (folder) called `HornMorphoA-2.6`, which contains all of the files that you need to run HORN MORPHOA.
2. Go to the `HornMorphoA-2.6` directory (folder), and enter the following, making sure that you are running some version of Python 3.

```
python setup.py install
```

Use

STARTING THE PROGRAM

Start up the Python interpreter, again making sure that you are running at least Python 3.0, and type the following to load the program.

```
import l3
```

FUNCTIONS

Options for each function are shown with their default values.

```

anal(language, word)
Options: roman=False, root=True, gram=True, citation=True, raw=False,
nbest=100 [Amharic only]

Performs morphological analysis of the word. For ambiguous words returns the first nbest
analyses. For Amharic only, analyses are ordered by their estimated frequency.

>>> l3.anal('ti', 'ኘብ')
word: ኘብ

>>> l3.anal('ti', 'ፔፕሲ')
?word: ፔፕሲ

>>> l3.anal('am', 'የማያስፈልጋትስ')
word: የማያስፈልጋትስ
POS: verb, root: <fl_g>, citation: አስፈለገ
subject: 3, sing, masc
object: 3, sing, fem
grammar: imperfective, causative, relative, definite, negative
conjunctive suffix: s

>>> l3.anal('om', 'afeeramaniiru')
word: afeeramaniiru
POS: verb, root: <afeer>, citation: afeeramuu
subject: 3, plur
derivation: passive
TAM: perfect

>>> l3.anal('ti', 'በዘጋጥመና')
word: በዘጋጥመና
POS: verb, root: <gTm>, citation: አጋጠመ
subject: 3, sing, masc
object: 1, plur
grammar: imperfective, reciprocal, transitive, relative
preposition: bI

>>> l3.anal('am', 'አይደለኝም')
word: አይደለኝም
POS: copula, root: <ne>
subj: 3, sing, fem
negative

>>> l3.anal('ti', 'ዘየብለይ')
word: ዘየብለይ
POS: verb, root: <al_e>, citation: አለ
subject: 3, sing, masc
object: 1, sing
grammar: present, relative, negative

>>> l3.anal('om', 'dubbanne')
word: dubbanne
POS: verb, root: <dubbadh>, citation: dubbachuu
TAM: past, negative
POS: verb, root: <dubbadh>, citation: dubbachuu

```

```

subject: 1, plur
TAM: past

>>> l3.anal('am', 'lezemedocacnm', roman=True)
word: lezemedocacnm
POS: noun, stem: zemed
possessor: 1, plur
grammar: plural
preposition: le, conjunctive suffix: m

>>> l3.anal('am', 'ቢያስጨንቁአቸው', root=False, gram=False)
word: ቢያስጨንቁአቸው
POS: verb, citation: አስጨነቀ

>>> l3.anal('am', 'ለዘመዶቻችንም', raw=True)
[('zemed', [-acc, cnj='m', der=[-ass], -dis, +plr, pos='n',
poss=[+expl, +pl, -p2, +plr], pp='le', rl=[-acc, +p], v=None))]

>>> l3.anal('am', 'ይመጣሉ')
word: ይመጣሉ
POS: verb, root: <mT'>, citation: መጣ
subject: 3, plur
grammar: imperfective, aux:alle
POS: verb, root: <mTT>, citation: መጠጠ
subject: 3, plur
grammar: imperfective, aux:alle
POS: verb, root: <mT'>, citation: ተመጣ
subject: 3, plur
grammar: imperfective, aux:alle, passive

>>> l3.anal('am', 'ይመጣሉ', nbest=1)
word: ይመጣሉ
POS: verb, root: <mT'>, citation: መጣ
subject: 3, plur
grammar: imperfective, aux:alle

anal_file(language, input_file, output_file)
Options: root=True, gram=True, citation=True, raw=False
Runs anal on the words in a file.

>>> l3.anal_file('am', 'l3/languages/am/data/ag.txt',
'13/languages/am/data/ag_out.txt')
Analyzing words in l3/languages/am/data/ag.txt
Writing to l3/languages/am/data/ag_out.txt

seg(language, word) [Amharic and Oromo verbs and Oromo nouns only]
Options: none
Performs morphological segmentation on the word. Morphemes are separated by '-'; stems/roots
appear within '{}'.

>>> l3.seg('am', 'ሲያቋብረብሩን')
ሲያቋብረብሩን: s(cnj1)-y(sb=3sm|3p)-{Cbrbr+a12e3e4_5}(imprf,trans)-u(sb=2p|3p)-
n(ob=1p)

```

seg_file(*language*, *input_file*, *output_file*)

Options: none

Runs seg on the words in a file and writes them to another file.

```
>>> l3.seg_file('am', 'l3/languages/am/data/ag.txt',
                'l3/languages/am/data/ag_out.txt')
Segmenting words in l3/languages/am/data/ag.txt
Writing to l3/languages/am/data/ag_out.txt
```

phon(*language*, *word*) [Amharic only]

Options: gram=True

Converts an Amharic word written in Ge'ez characters to a romanized form that shows consonant gemination and the epenthetic vowel (represented by 'I'). If multiple pronunciations are possible, they are ordered by estimated frequency.

```
>>> l3.phon('am', "ደመታሉ")
yImetal_u (132) yIm_et_al_u (61)
>>> l3.phon('am', "ደመታሉ", gram=True)
-- yImetal_u
POS: verb, root: <mt'>
  subject: 3, plur
  grammar: imperfective, aux:alle
-- yIm_et_al_u
POS: verb, root: <mt'>
  subject: 3, plur
  grammar: imperfective, aux:alle, passive
>>> l3.phon('am', 'እንደብር')
?IndIbIr (0)
```

phon_file(*language*, *input_file*, *output_file*) [Amharic only]

Options: gram=True, print_ortho=False, word_sep='\n', anal_sep=' '

Runs phon on the words in a file.

```
>>> l3.phon_file('am', 'l3/languages/am/data/ag.txt',
                'l3/languages/am/data/ag_phon.txt')
Analyzing words in l3/languages/am/data/ag.txt
Writing analysis to l3/languages/am/data/ag_phon.txt
>>> l3.phon_file('am', 'l3/languages/am/data/ag.txt',
                print_ortho=False, word_sep=':')
Analyzing words in l3/languages/am/data/ag.txt
yIh:meShaf:yezarE:
01:amet:gedema:bedenbu:mIrmera:alfo:tat_Imo:beweT_a:gizE:tal_aq_
tal_aq:cIg_Ir:feTrob_IN:neb_er:.
```

exit()

Options: none

Exits HornMorpho, saving any analyses or generated forms in a file to be loaded next time you use the program. This will significantly speed up the performance of the program.

```
>>> l3.exit()
```
